

LAUNCHTIME - ROCKET LAUNCH SCHEDULE

LaunchTime for iOS update is available on the App Store

GUILDFORD, UK - Thursday, 1 December 2016 - New update is available today for LaunchTime. This update fixes bugs that were revealed after the initial launch and has new features that were requested. The most requested feature was local launch time, which is available in this update. There were also a lot of changes under the hood which made the app more stable and faster. We have removed the Apple Watch support in this version. We are working on a better, more useful Watch app which will be released next year.

Release notes:

What's new?

- The time of the launches are converted to the local time zone
- Pull to Refresh

Improvements

- All of the rocket manufacturers are displayed
- Rewrote most of the app to make it safer and more stable
- Minor UI changes to make it look nicer

Fixes

- Critical bug which caused the Launches list to display only a few launches with the wrong month headers
- Removed Apple Watch support. We are working on making a better Apple Watch app which will be released next year.

LaunchTime is available for free for iPhone. The update is available worldwide on the Apple App Store.
